The CNR-ISAC Informatics Infrastructure for the Satellite Climatological and Oceanographic data: production, harmonization and dissemination in Interoperability Frameworks

*Vega Forneris, Cristina Tronconi, Gianluca Volpe, Simone Colella, Bruno B. Nardelli, Andrea Pisano,
Rosalia Santoleri*

GOS presentation

The Satellite Oceanography Group (**GOS**) is one of the leading Units of the **Earth Observation** Division of **ISAC-CNR** since 1987 and focuses on operational Satellite Data processing and analysis.

CNR-ISAC GOS is responsible for the **Mediterranean** and **Black Seas satellite operational systems (Ocean Color (OC) and Sea Surface Temperature (SST))** in the framework of several Partnerships (e.g. MyOcean, SeaDataNet, MONGOOS, RITMARE, etc) and carries out regular **oceanographic campaigns** to acquire (**insitu data**) meteorological, hydrographic and biological data, as well as in-water and above-water optical measurements for the validation of ocean color satellite data.

Interoperability

A property referring to the ability of diverse systems and organizations to work together (inter-operate).

Wikipedia

“Being able to accomplish end-user applications using different types of computer systems, operating systems, and application software, interconnected by different types of local and wide area networks”

James O'Brien, George Marakas: Introduction to Information Systems, McGraw-Hill/Irwin)

Interoperability

Services:

- Common file format

- Common protocols

Data:

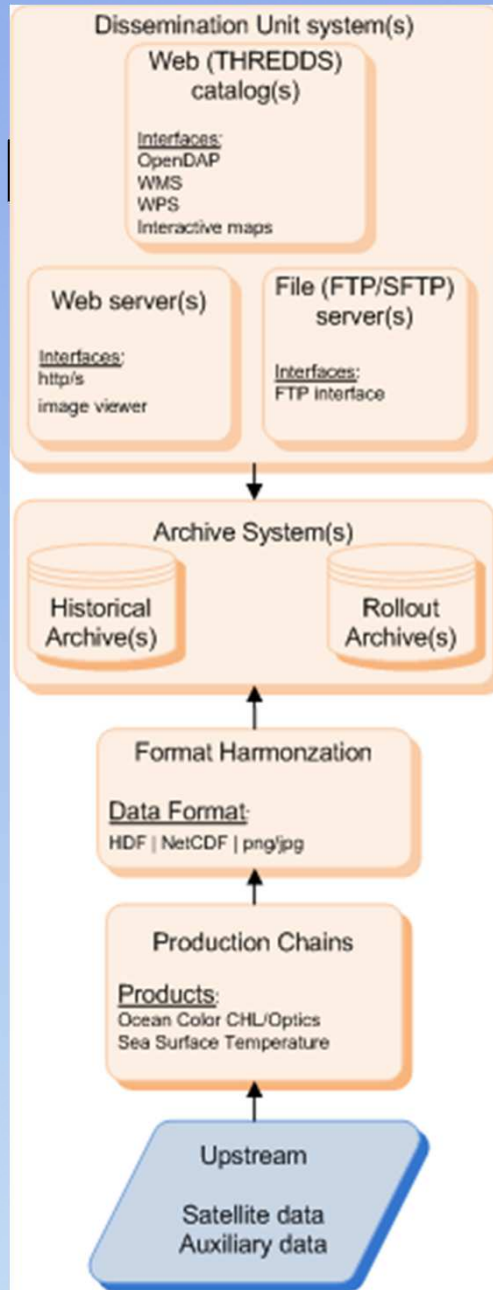

- Common data format

- Common metadata

Outline

- Satellite data processing
- Products harmonization
- Products dissemination

Satellite processing workflow

Data processing

Sensors	Upstream
MODIS (AQUA)	NASA (Oceancolor GSFC & Lance), ESA, NOAA
Multisensor SST	IFREMER, NOAA
SEAWIFS	CNR, NASA (Oceancolor GSFC)
MERIS	ESA
MODIS (TERRA)	NASA (Oceancolor GSFC & Lance)
VIIRS	NASA (Oceancolor GSFC)

	L3/L4 Products	Temporal resolution	Proc freq
Ocean Color	CHL Optical (RRSXXX, KD490, PAR, SENZ, TSM, ...)	Daily Monthly, weekly and 5days average	NRT DT REP
Sea Surface Temperature	HR (1/16°) UHR (1/100°) Anomalies	Daily	NRT REP

Data processing

Grid User Interface

Sends and controls grid jobs

Total Processing Time: 40-60 minutes/day

Download source & auxiliary files

Grid Gatekeeper + Working Nodes

Download Source & aux files

Process Source files to L2

Process L2 files to L3 products

Process L3 files to L4 products

Products harmonization

Upload Products

Historical Archive

Rolling Archives / Dissemination Units

Product harmonization

Why “product harmonization”?

One of the main objective is to integrate existing products in a “**system of systems**” (e.g. “MyOcean”, “SeaDataNet”, etc) for disseminating products to the highest number of end users.

This requires to define **common interfaces** and **common data formats** in order to connect systems and provide users with unique and easy interfaces for product access.

Product harmonization

- File format
- Data variables names and units
- Filename format

Product harmonization

Use case: MyOcean – OCTAC (Ocean Color Thematic Assemble Center)

An hard and long work has been done in order to decide common data format specification as well as filename convention.

...is not easy to “convince” producers to change their own data...

Product harmonization

Use case: MyOcean – OCTAC (Ocean Color Thematic Assemble Center)

File format: NetCDF v3 (moving to NetCDF v4)

Format conventions (variables names and units):

- CF 1.4
- INSPIRE
- GDS (GHRSSST Data Service)
- EN-ISO19115
- EN-ISO19119
- ...

Product harmonization

Use case: MyOcean – OCTAC (Ocean Color Thematic Assemble Center)

NetCDF-CF variables:

Variable	Var Name nc file	Standard Name	Units
Chlorophyll	CHL	mass_concentration_of_chlorophyll_a_in_sea_water	milligram m-3
KD490	KD490	volume_attenuation_coefficient_of_downwelling_radiative_flux_in_sea_water	m-1
RRS??? Where ???= band	RRS???	surface_ratio_of_upwelling_radiance_emerging_from_sea_water_to_downwelling_radiative_flux_in_air	sr ⁻¹
BBP	BBP	volume_backwards_scattering_coefficient_of_radiative_flux_in_sea_water_due_to_particles	m-1
ZSD	ZSD	secchi_depth_of_sea_water	m
...

Product harmonization

Use case: MyOcean – OCTAC (Ocean Color Thematic Assemble Center)

Filename format:

{valid date}[_freq flag][_end date]-{producer}-{level/type}-{parameter}-{config}-
{region}-[bul date]_{free field}-v{file version}.nc

“-” : mandatory fields ; “_” : optional fields

Examples:

20130914_d-OC_CNR-L3-CHL-MedOC3_A_1KM-MED-DT-v01.nc

20130916_d-ACRI-L4-CHL-OINTERPOL_A_4KM-GLO-NRT-v01.nc

20130914_d-OC_PML-L3-RRS412-nasa_A_1KM-ARC-NRT-V01.nc

20130401_m_20130430-OC_CNR-L4-KD490-MedOC3_A_1KM-BS-DT-v01.nc

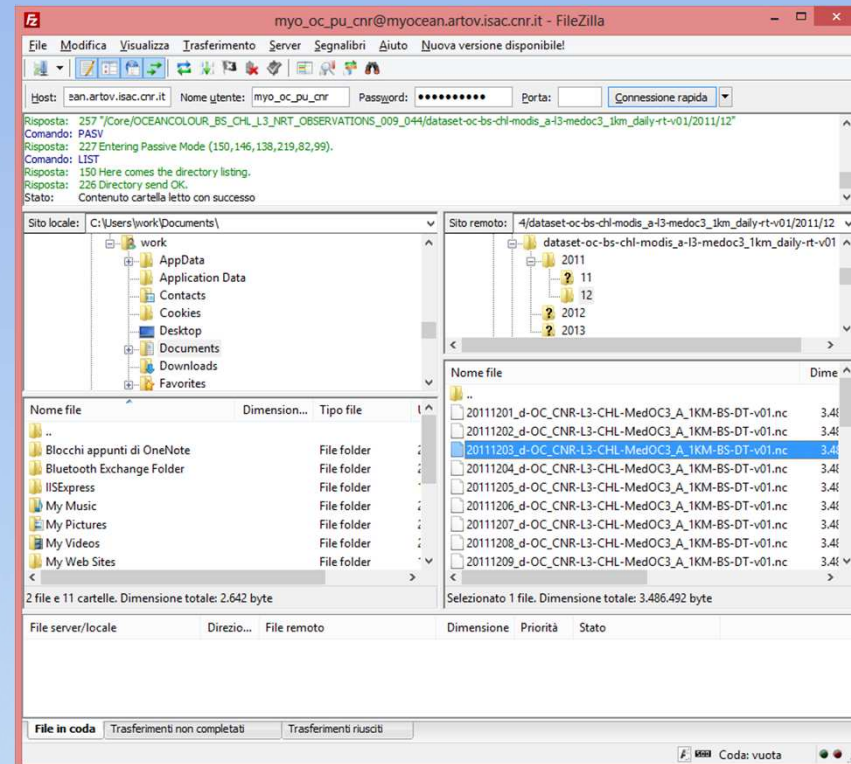

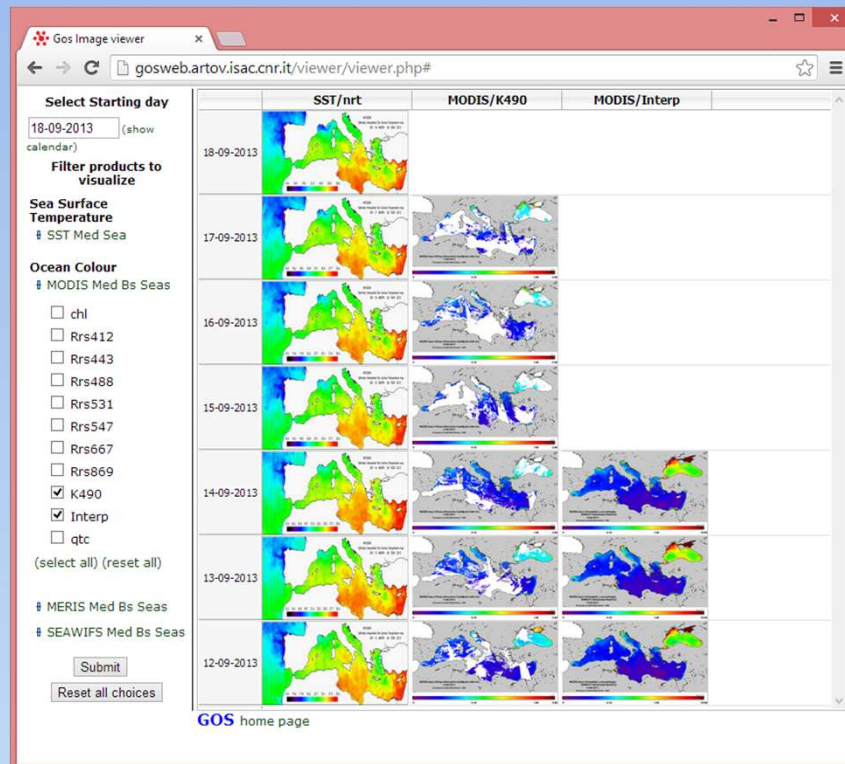

Product dissemination

Once harmonized, products are ready for being published and disseminated.

Products are stored in **filesystems** and organized in **catalogs** which are logical directories of on-line data resources, encoded as **XML** documents, which provide a place for annotations and other metadata about the data resources to reside.

Product dissemination

http, ftp, sftp (Basic Interfaces)

Product dissemination

TDS - THREDDS Data System (Advanced Interface)

- reads the XML metadata archive and netcdf metadata
- can aggregate products
- creates dynamically interfaces like:
 - OpenDaP,
 - WMS,
 - http (direct download)
 - and others

Product dissemination

TDS - THREDDS Data System (Advanced Interface)

The screenshot displays the THREDDS Data System Advanced Interface. On the left, a 'Catalog' sidebar lists various datasets under 'MyOcean' and 'GOS - ISAC - CNR'. The main area shows a 'Dataset: OCEANCO medoc3dineof_4km' with details on data format (NetCDF), type (GRID), and authority (GOS-ISM). A 'Documentation' section lists rights and project information. Below, 'Access' methods (OPENDAP and WMS) and 'Creators' (Operative Satellite Group) are listed. The 'Variables' section shows 'mass_concentration_of_chlorophyll_a_in_sea_water'. The 'Geospatial Coverage' is defined by longitude (-6.0 to 36.5) and latitude (30.0 to 46.0). The 'Properties' section is partially visible.

The right side of the interface features a 'GODIVA2 Data Visualization' window. It shows a map of the Mediterranean Sea with a color scale for chlorophyll concentration ranging from 0.01000 (blue) to 10.000 (red). A data popup indicates: Lon: 16.287592, Lat: 35.966347, Value: 0.02065. The visualization includes a calendar for September 2013, a date/time selector (14 Sep 2013 00:00:00), and a 'Fit layer to window' button. The Reading e-Science Centre logo is visible at the bottom left of the visualization window.

Product dissemination

MOTU (Advanced Interface)

Motu is a high efficient and robust Web Server which fills the gap between heterogeneous Data Providers to end users.

- connects to TDS OpenDaP interface
- handles, extracts and transforms oceanographic data
- has the capacity to process huge volumes of data without service overloading or performance collapse
- can set different downloading queues (priorities)
- is able to connect to a central authentication and provides advanced transaction accounting logs
- can federate several data servers

Product dissemination

MOTU (Advanced Interface)

The screenshot displays the MyOcean MOTU web interface. The browser address bar shows the URL: `myocean.artov.isac.cnr.it/mis-gateway-servlet/Motu?action=productdownloadhome&service=http%3A%2F%2Fpurl.org%2`. The page title is "Access Services > Data Product Catalogue > Download".

The main content area is titled "DATASET-OC-MED-OPT-MODIS_A-L3-KD490_1KM_DAILY-RT-V01". Under the "SELECTION" section, there are several configuration options:

- Select output:** A dropdown menu set to "NetCDF".
- Select region:** A dropdown menu set to "Product Region", with a text input field containing "45.998546600". Below it are two more input fields: "-6" and "36.500480651".
- Select time range:** Two date pickers, both set to "2013-09-18", with a "to" label between them.

Below the selection options is a "VARIABLE" section containing a table:

Download	Name	Description	Standard name	Unit	Dimensions
<input type="checkbox"/>	KD490	MED Daily Binned - Kd_490	volume_attenuation_coefficient_of_downwelling_radiative_flux_in_sea_water	m ⁻¹	(time, lat, lon)

At the bottom of the table, there is a "Download" button with a right-pointing arrow and a "Script" button.

The footer of the page includes the Copernicus logo, the text "All rights reserved", and a row of national flags.

Product dissemination

Use case: MyOcean - Centralized Web Portal

The image displays a screenshot of the MyOcean web portal. On the left, there are four panels showing the navigation menu with categories like ABOUT US, SERVICES, PRODUCTS, NEWS & EVENTS, FOCUS ON, PRODUCT SHOWCASE, USER NEWSLETTER, EDUCATION, and SCIENTIFIC PUBLICATIONS. The main content area on the right shows a data visualization interface for the Mediterranean Sea. The title is "Mediterranean Sea Monthly and Weekly means of Surface Chlorophyll Concentration from Satellite observations". The product ID is OCEANCOLOUR_MED_CHL_L4_NRT_OBSERVATIONS_009_041. The dataset is "Ocean Colour Mediterranean Sea (4km) MODIS daily interpolated L4 Delayed Time Chlorophyll A". The variable is "mass_concentration_of_chlorophyll_a_in_sea_water". The units are milligram m-3. The time range is from 2013-08-01 to 00:00:00.000Z. The elevation is set to 0. The visualization shows a map of the Mediterranean Sea with a color scale from 0.01 to 10, indicating chlorophyll concentration. The map is overlaid on a satellite image of the region. Below the map, there are links for Documentation, View in MyOcean catalogue, Open in Google Earth, Permalink, Email Link, and Export to PNG.

Conclusions

Using standard formats and interfaces permits to “easily” confederate many systems which create higher level of services towards end users:

- Single access point for different data repositories (confederations of systems),
- Queryable data (through metadata)
- New functionalities (i.e. Subsetting, Online data viewing, etc)

...more & better services...more users!!!

THANKS

for being still awake

Questions???
